SPECIFICATIONS

Part No: TT Press

Electrical Power: 0.55 KW

Power Source: 230V, single phase

Compressive Force: 2,000 kg

Ram Stroke: 40 mm

Shut Height (BDC): 135.80 mm

Weight: 41.0 kg

Dimensions: W200 x H580 x D300

Surface finish: RAL 7038 light grey

The TT press is constructed from spheroidal cast iron and its one piece structure offers the highest rigidity for a very stable crimp height. The 135.80 mm shut height (from the top of the baseplate to the bottom of the ram) allows the TT to accept JST industry standard applicators and almost any other industry standard applicator available in the market.

A clear safety cover incorporating a safety interlock, is a standard issue with the machine, which offers the operator an unhindered view of the crimping process.
